

Turning Ideas into Action.

Strategic Telecom Solutions is the company that mobilizes operations through the power of wireless. We create, implement and support solutions that untether people and processes, enabling our clients to be **more productive, more mobile, and ultimately, more profitable.**

Customer and their needs:

Due to a burgeoning criminal element that is becoming more dangerous and sophisticated, many law enforcement agencies are transitioning from traditional community-policing to intelligence-led policing efforts. Intelligence-led policing entails the effective deployment of technology to gather and store data from multiple jurisdictional systems that can be later retrieved to track trends and patterns that make it easier to enforce the law. Crime center technology provides the software tools along with the surveillance equipment such as video cameras and environmental sensors to provide the knowledge management capabilities to more effectively predict criminal activity and solve crimes. Strategic benefits of intelligence-led policing span to coordination of activities across multiple law enforcement agencies, identification of stolen vehicles and property, crime surveillance at the point of perpetration, geo-tagging for investigative purposes, tracking activities in crime hot zones, and geo-fencing within specific areas. The building out of a real-time crime center can undergird the effective deployment and management of your intelligence-led policing initiative.

Our team provides the expert advice for planning, equipping, and building out your crime center with the latest software and hardware systems that provide you with the needed information to apprehend the “hard-to-catch” criminal. We will guide you through the development and implementation of a customized intelligence-led initiative. The SkyCop® platform is scalable depending on how far you want to go. Its products and services allow you to expand your enforcement capabilities and become the recognized leader for technology adoption applied to law enforcement in your area.

Field-Ready Benefits:

- Our Field-Ready Methodology is an innovative process designed to make wireless work for you
- Consulting services to build and design a solution that is scalable and versatile
- Custom Implementation and Installation services that adhere to city and law enforcement agency needs
- Integration with existing in-vehicle solutions, LMR replacement options, and dispatch systems

Connecting you with wireless possibilities.

SkyCop Systems

SkyCop 2-PTZ Camera Enclosure System

- ▶ Strong, Durable Construction
- ▶ Supports 3G EVDO data network
- ▶ 2-Way Audio Communication
- ▶ PTZ Day / Night 36X Cameras
- ▶ H.264 Resident Digital Recording
- ▶ Optional Bullet-Resistant Kit
- ▶ Optional Thermal Imaging Camera Systems
- ▶ Optional Gun Shot Detection Systems
- ▶ Optional License Plate Recognition Systems

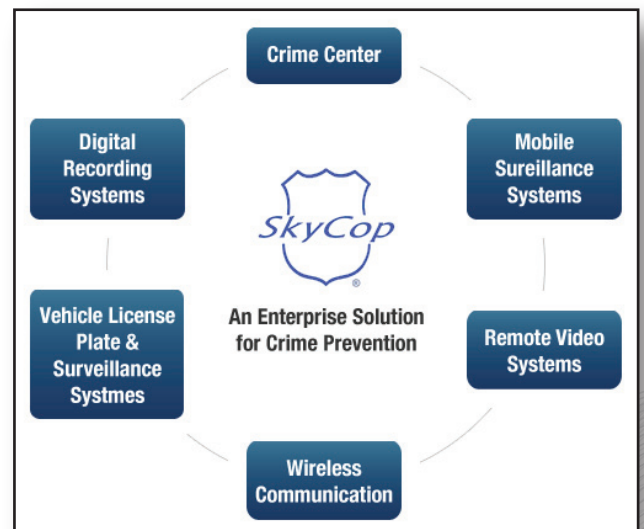

SkyCop Security Enclosure Systems

It is becoming increasingly difficult to keep our local communities, campuses, production plants, and office facilities completely safe from the threat of criminal and terrorist activities. Today, traditional community-policing in which an officer cruises the neighborhood and remains visible is ineffective when it comes to catching sophisticated criminals. Most of us face a criminal enemy that is an expert at clever tactics to avoid detection. Generally, once the bad guys learn where they are being watched, they pick up their operations and move to another location. You have to move and be one step ahead at all times. With the SkyCop® platform, you can effectively deploy advanced technology as your weapon to work smarter and stay one step ahead of the criminal.

The SkyCop Security Enclosure System is a remote, self contained, intelligent video security system that can operate autonomously or as a networked system and incorporates the latest technology in High Compression Digital Recording, Analytic Video Monitoring, Thermal Imaging Monitoring, License Plate Recognition, Environmental Monitoring, and Gun Shot Detection Monitoring.

Key Benefits:

- Flexibility & mobility enabling the organization or agency to monitor criminal activity anywhere and at anytime.
- The element of surprise allowing your team to be in the hotspots at the right time when the criminal element least expects it.
- Increased savings in time and operating costs since fewer resources are required to effectively cover more territory.
- Better responsiveness since your patrol officers can be dispatched to critical events with a focused approach.
- Enhanced public and officer safety since you are able to monitor critical hotspots more effectively and efficiently.
- Data analytics that allow you to examine past criminal behavior to better predict future criminal activity.

An Enterprise Solution for Crime prevention.
